

Cornerstone 3

Trading Methods

The cornerstone of 'Methods'
is all about the process of
trading...

**And the majority of this course
covers the actual application of
specific trading methods**

**From analysing the markets to
begin with...**

**Then placing orders to get you
into a trade**

**And finally, placing orders to
get you out again**

**You'll be seeing everything in
great detail in the modules
that are coming up**

**But let me give you a quick
overview here of the essential
component methods behind a
good trading strategy**

**We break it down into 5
chunks...**

1) What to trade

2) How much to trade

3) When to enter a trade

**4) When to exit a trade that
wins**

**5) When to exit a trade that
loses**

So we'll be covering when to
enter and exit trades in the
Trading Tools module

And we've already covered
“How much to trade” in the
money management video

**Remember how we limit risk
on each trade to 3% of your
account?**

**(I'll be showing you exactly
how to do this when it comes
to placing your orders)**

So it just leaves us to cover
“**What to trade**”

**In the next video I'll be telling
you all about the foreign
exchange markets (Forex)...**

**And why I think they offer
incredible opportunities to
home-based traders like us**
